GIA NATURAL COLORED DIAMOND REPORT

December 22, 2022

Report Type **Identification and Origin Report**

GIA Report Number **6227729590**

Shape and Cutting Style **Pear Modified Brilliant**

Measurements **3.74 x 2.21 x 1.62 mm**

Carat Weight **0.10 carat**

Color Grade **Fancy Intense Pink**

Color Origin **Natural**

Color Distribution **Even**

PINK DIAMONDS

Pink is one of the rarest colours that occur in natural diamonds.
Pink diamonds are mined in many different locations around the world including Angola, Australia, Brazil, Canada, The Congo, Russia and Venezuela.
Pink colour is caused by the extreme forces of nature as the diamond is formed about 150 kilometres below the Earth's surface.
At Argyle in Western Australia the host rock from which the diamonds are recovered is called lamproite, a rock related to but different from the kimberlite which is the world's main source of diamonds from other localities.
Argyle pink diamonds have been subjected to extremes of both heat and pressure by the forces of Nature which have combined to produce a unique atomic configuration causing the very rare intense pink colours found in Argyle pink diamonds.
Argyle diamonds graded Red and purplish Red are considered the rarest of all red diamonds because of the extremely low numbers that are found in the global market.
At GSL we use advanced spectroscopic techniques and advanced instrumentation to identify the unique atomic structures that prove that the diamond comes from the Western Australian deposit.
Pink diamonds from other locations can be identified as non-Australian but their specific origin cannot be determined.

Comments:

Origin: Argyle Deposit, Western Australia

This diamond exhibits advanced spectroscopic analysis and other characteristics which are consistent with known documented pink diamonds that originate from the Argyle diamond deposit Western Australia.

COLOURED DIAMOND REPORT

*Clarity by 10x stereomicroscope **Colour by Calibrated Master Stones
 Proportions and symmetry assessed using Sarin technology

Cutting Style PEAR SHAPE
Carat Weight 0.100 ct
Dimensions 3.75 x 2.21 x 1.61 mm
Colour Grade** NATURAL FANCY PINK
Clarity Grade* SI 1
Proportions
 Total Depth 72.9%
 Table Spread 58.5%
 Crown Height 17.2%
 Pavilion Depth 44.8%
 Girdle Thickness 11.2%
Finish GOOD
 Polish Good
 Symmetry Good
 Culet Pointed
Fluorescence Moderate Blue

PHOTOGRAPHIC RECORD

The photograph above shows the diamond magnified at the time of examination and may be used to re-identify the stone should the need arise in the future. Due to varying behaviour of some gemstones under different lighting conditions, variations in colour may occur in the photograph when compared to the stone.

GEM AUTHENTICITY CERTIFICATE

Inscription No.: PK00058
Colour: FIP (6P*)
Clarity: SI1
Shape: MODIFIED PEAR
Weight: 0.10ct
Origin: ARGYLE
GIA: 6227729590
GSL: AA66870-10

Tracing its origins to the rugged landscapes of the East Kimberley region of Western Australia, every pink diamond from the Argyle mine is an extraordinary one-of-a-kind masterpiece in its own right.

*COLOUR GRADING EQUIVALENCE BY PINK KIMBERLEY

DISCLAIMER: THIS DOCUMENT IS NOT A VALUATION. IT DESCRIBES THE IDENTIFYING CHARACTERISTICS OF THE A DIAMOND UTILISING THE GRADING TECHNIQUES AND EQUIPMENT AVAILABLE TO PINK KIMBERLEY AT THE TIME OF ITS ASSESSMENT.
